Irfan Ahamed Kodakkadan

IIT Bhilai 2023 | Software Engineer | 2.6 YOE

+91-7795-529-741 IrfanAKdn@proton.me Irfan AK irfan43 indus43 Bangalore, India

Summary

Software Engineer with 2.6 years of experience architecting high-throughput, low-latency backend microservices using **Java (Spring Boot)** and **Go**. Specialized in building resilient **REST/gRPC APIs** under strict **sub-100ms SLAs**, incorporating **circuit breakers**, **fail-safe/fail-closed semantics**, **rate limiting**, and **graceful degradation**. Proficient in operating real-time data pipelines, region-replicated caching, and streaming infrastructure **(Kafka, Redis KV/Data Grids, Spark, Flink)**. Leverages modern AI tooling **(Cursor AI, Gemini CLI)** and **TDD** to drive **zero-downtime production reliability** and **rapid feature delivery**

Education

Indian Institute of Technology, Bhilai *July 2019 – May 2023*
Bachelor of Engineering in Electrical Engineering *GPA: 7.15/10*

Coursework: Cryptography, Software Tools and Technologies, Artificial Intelligence, Operating Systems.

Technical Skills

Languages: Go-lang, Java, ASP.NET C#, Python, C, javascript, Node.js, Node,

Backend & Frameworks: Spring Boot, Spring MVC, Hibernate, RESTful APIs, gRPC, Microservices Architecture, High-Level/Low-Level Design (HLD/LLD), OOP, Data Structures & Algorithms

Distributed Systems & Resiliency: Circuit Breakers, Backpressure, Retries & Timeouts, Fail-Closed / Fail-Safe Patterns, Graceful Degradation, Rate Limiting & Pacing

Data Infrastructure & Caching: Apache Kafka, Apache Spark, Apache Flink, Redis (Region-Replicated Caching / Data Grids), PostgreSQL, MySQL, MongoDB, Elasticsearch

Cloud, DevOps & Observability: AWS, GCP, Docker, Kubernetes, Terraform, CI/CD Pipelines, Grafana, Prometheus, Linux

AI & Engineering Tools: Cursor AI, Gemini CLI, React, Test-Driven Development (TDD), Git, Agile/Scrum

Professional Experience

Software Engineer-1 **Bangalore, India**
AirAsia Move *Sept 2023 – Mar 2026*

- **Microservices Migration: Architected** the transition of legacy **ASP.NET C#** monolithic backend services to highly scalable **Dockerized Go-lang microservices**, Engineered resilient REST/gRPC backend services implementing **circuit breakers**, **retries**, **Rate Limiting** and **fail-safe/graceful degradation logic** to maintain **low-latency sub-100ms SLAs**.
- **High-Performance Java Services:** Built and maintained scalable ancillary microservices using **Java Spring Boot**, **Spring MVC**, and **Hibernate**; integrated **Kafka messaging** pipelines to handle concurrent data processing for high-availability systems.
- **Infrastructure as Code (IaC):** Provisioned and managed multi-region **GCP cloud infrastructure** using **Terraform** to automate the deployment of containerized **Go-lang microservices** and **Kubernetes** pods.
- **Core Library Development: Architected** reusable backend modules and **CI/CD** deployment automation pipelines, **reducing cross-project release times** across microservices and **accelerating feature delivery**.
- **Monitoring & Alerting:** Integrated automated monitoring with **Grafana** and **Prometheus**, establishing precise **alerting** thresholds to rapidly resolve **Production Issues**; reduced **MTTR (Mean Time to Resolution)** by 70%, minimized **false alerts**, and improved **system uptime** metrics.
- **Security & Reliability:** Conducted rigorous system audits to identify and patch critical **security vulnerabilities**, fortifying infrastructure against potential exploits and ensuring **secure data handling**.
- **Full-Stack & Data Operations:** Executed complex **database migrations** utilizing Python scripts, developed ancillary services using Java Spring Boot, and implemented user-facing interfaces with **React**, **JavaScript**.
- **DevOps & QA:** Championed **Test-Driven Development (TDD)** across the engineering lifecycle, integrating comprehensive test suites into **CI/CD pipelines** to guarantee flawless, rapid deployments.
- **Databases:** Utilized **Redis** KV stores for local/region-replicated **caching**, **optimizing** lookup latencies and handling **near-real-time state**.
